

Zetes 3iV WES Express FAST START VOICE SOLUTION

KEY BENEFITS

- Lowest total cost of ownership (TCO)
- Fastest return on investment (ROI)
- Greatest flexibility available
- Real-time dashboards provide operational & management visibility

Voice picking has been proven to significantly improve the accuracy and speed of order picking, plus enhance many other operational functions in the warehouse. Part of the 3i Voice (3iV) Solution set, 3iV WES Express takes all the industry best practices and produces one product which delivers even greater benefits over and above traditional approaches to voice picking.

3iV WES Express allows any business to benefit from voice-enriched processes, regardless of existing warehouse management software or mobile data capture hardware being used. Whether your operation has 100s of stock pickers or fewer than 10, voice picking is now commercially viable with 3iV WES Express.

Supports Any Stock Picking Strategy

- Single Order Picking
- Multi Order Picking - Discrete & Batch
- Stock Picking combined with Scanning or RFID
- Pick to Conveyor
- Pick and Pack
- Pick by Line

Why bring voice into your supply chain?

7 benefits that speak for themselves:

- 1. Increased productivity:** Greater operator visibility and accountability. Improve stock picking rates by 15-20% typically and by up to 50% for single item picks. Fewer distractions for operators. Implement 'wave' or 'batch' order picking for multichannel, e-commerce orders or multiple orders.
- 2. Improved accuracy:** Reduce errors by up to 85% compared to paper picking and up to 15% compared to barcode scanning. Reduce the need for auditing or re-works, reduce returns management.
- 3. Reduced operating costs:** Reduce training costs by around 50%. New starters reach full productivity quicker. Better utilisation of resources to reduce costs. Operate 'just in time' resourcing and allocate more staff as required for peak times.
- 4. Improved Customer Satisfaction:** Execute "right product, right place, right time at the right price" - every time. Optimise your warehouse processes to meet customer service requirements ensuring stock accuracy & quality. Improve logistics and supply chain performance
- 5. Increased operator satisfaction:** Operators work ergonomically with hands and eyes free to handle products. Using intuitive voice prompts increases workers health & safety.

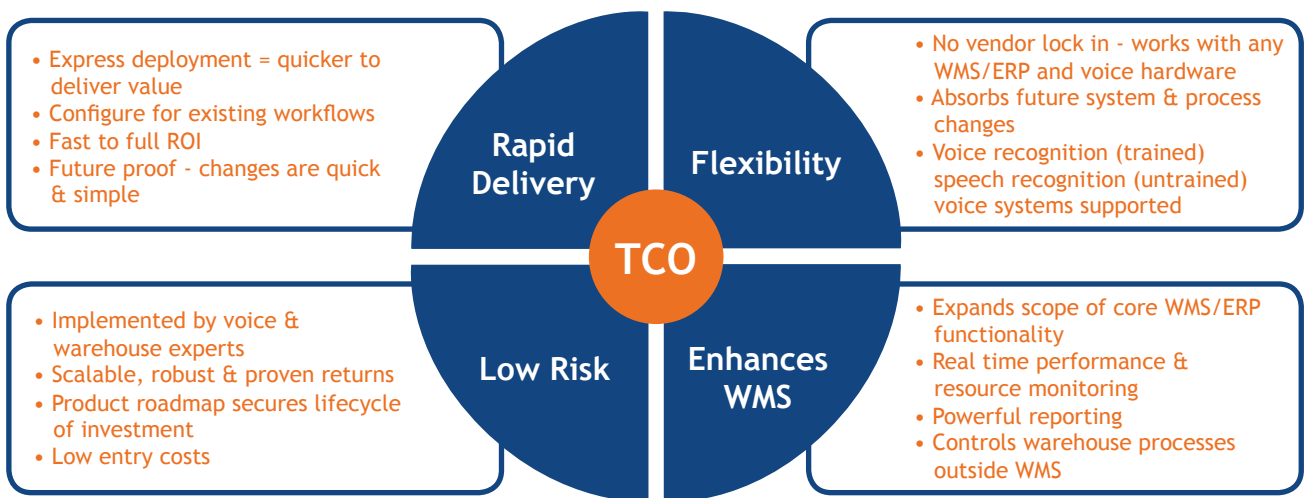

6. **Increased business intelligence:** Real-time system-user dialogue ensures optimal data visibility. It allows for real time operational & performance management and increased supply chain visibility.

7. **Faster Return on Investment:** Voice picking technology implementations offer a fast Return on Investment (ROI) and provide continuous significant supply chain improvement.

“Using voice has enabled us to adapt easily to suit the different order profiles required for our sales without significantly increasing costs. Switching to voice picking has recession proofed our business and created a much leaner operation ready for further growth as the economy improves.”

*John Hepworth,
Managing Director
Faber Music Distribution*

3iV WES Express the voice picking software with the lowest total cost of ownership (TCO)
